

DYNAMIC WEIGH STATION

View vehicle images and weight information from patrol car.

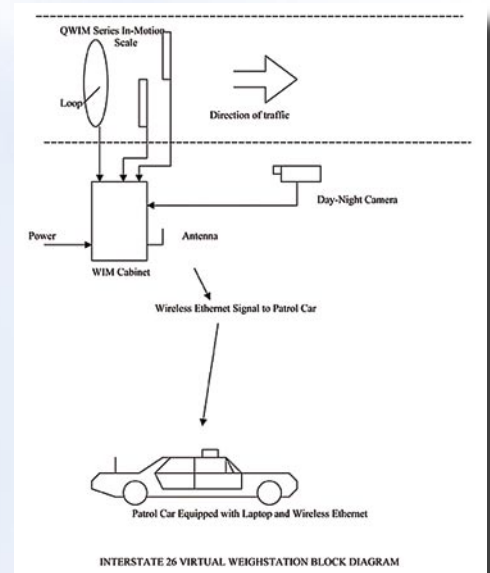

Video capture of selected vehicles.

Cardinal's Dynamic Weigh Station

offers the flexibility that you need to deal with limited resources and growing traffic volume. Cardinal's system uses a high-speed camera to capture the image of an overweight vehicle and transmits it, along with weight data, to a waiting patrol car. The wireless transmission provides the officer with the freedom necessary for quick reaction to overweight vehicles.

From vehicle counting and classification to high-speed weigh-in-motion to approved multi-platform static scales for enforcement weighing, whatever your requirements are, Cardinal can provide the system to meet your needs.

Cardinal's dealer network, online support, and unsurpassed field service ensures that your Cardinal system will continue to meet your needs for years to come.
